Cases

between man and man, although the various cereal dishes which constitute their regular meals are said to have a similar effect.

The son who continues to eat with his father "as he always had been doing," also continues to accept his authority. Indeed he could do little else at this stage, for he lacks the economic means to cut away. Neither at marriage nor after is there any transfer of wealth from father to son. The new tent recently pitched is no more than a dormitory to which the young couple retire at night. During the daytime the son is still to be seen in his father's tent, and, in the male quarters, things appear to be much the same as before. In the female quarters, the only superficial change is the more frequent appearance among the women of one who, before marriage, often sat among them if she had been a close neighbour or a close cousin previously; or of an additional helper if she had come from afar. On the surface things remain "as they always have been," although in fact, a whole set of changes have been initiated.

Rites de passage are few among the Bedouin. A man's progress in life is ceremonially marked by only four events: his birth, circumcision, marriage and burial. His development into manhood is not marked by clearly defined stages. About the age of seven, the henna markings on the front of a boy's shirt for protection from the evil eye are not renewed, the cowrie shell stitched to the front of his cap as a kind of talisman against the evil eye is removed and he is no longer permitted free access to the women's quarters. As he grows older, he will be instructed in goat-herding, and later taught to follow the sheep. In his late teens he will have to undertake the more arduous and responsible task of herding the camels. Coincident with camel-herding, he may be given a gun by his father. Shortly afterwards he must undertake the stringent test of manhood, a journey to a distant oasis for dates. These changes are not marked off by a *rite de passage*. The rites a man undergoes during the course of a lifetime are minimal, and in the sense that they are concerned with only the basic events in a man's life anywhere (save for circumcision, which is a minor celebration anyway), they are irreducible. Moreover, the rituals which exist do not comprehend the same multiplicity of relationships as rituals which occur in many other African societies.[4] It is true that the ceremonies referred to in this chapter by no means include all the Bedouin rituals. It is also true that the events mentioned vary in elaboration, and in the number of symbols present in them, but they are not multiplied or reduced for different people.

In this context it is important to stress that we are here dealing with a lineage society where social differentiation is not built up into differences of rank, where the roles to which a man succeeds are almost wholly captured by his kinship relationships with other men and which are sociologically to be distinguished from the roles a man enters into by acquisition of office,

[4] See, for example, the elaboration of rituals discussed in M. Gluckman (Ed.), *Essays on the Ritual of Social Relations*. Manchester: University of Manchester Press, 1962.

Cyrenaica

sorts of petty ways, listen to his grumbles about his agnates, interfere on his behalf in petty camp quarrels, shield him from the disciplinarian father and guard his property interests against the predatory father's brother; if the mother's brother dies without heirs, the sister's son can reasonably expect at least a share of his wealth. When the mother's brother is a member of a different corporate group, a sister's son cannot possibly expect to inherit from him in any circumstance.

The mother's brother may reside in a camp too distant to be much effective direct help in day-to-day living. His relative remoteness gives the relationship other possible opportunities, however. Rainfall in the semi-desert area of Cyrenaica is highly variable, both from year to year, and from place to place in any given year. As a result this shallow saucer of a depression may have sufficient rain to supply both the water needs of animals and crops, while an area a few miles distant will have inadequate water supplies for either. The mother's brother-sister's son link can mean water for animals and a crop of barley for both when, in successive years, the resources of one area or the other are inadequate.

The differences in the relations between men and their mother's brother do not end with a characterisation of their antipodal forms. The demographic structure of a group may be such that one man may have a number of mother's brothers, another only one; one man may have to share with several brothers, another may be an only son. Complications of this sort determine the precise relationships between men, but however intricate these may be, each corporate group has its matrilateral links with a group occupying a slightly different ecological area, and it also has a plurality of matrilateral connections within it. Further, if a direct connection is not available to any particular individual he can use an indirect link (e.g. father's mother's brother or mother's mother's brother) to satisfy his needs.

The Preference for Males

Thus far, the family and the social matrix in which it is embedded has been discussed in general terms, most particularly in reference to several selected sets of relationships. I wish now to place these relationships in a more specific setting with a brief discussion of the composition of a small camp of a group inhabiting the arid areas of central Cyrenaica. When the Bedouin give their views on the structure of the family in Cyrenaica they speak of it as consisting of a pair of spouses and about ten children, mainly males. The emphasis on males is not mere sentiment, overwhelmingly though it favours them against females. Additional males in a family increase the productive possibilities of a family in the sense that more herdsmen become available and larger ploughing commitments can be undertaken; an increase in the number of females has small effect on production since they are precluded from any direct participation in these activities. Both sexes, ranging in age from about seven years to mature adulthood, are necessary if a family

Cases

829 is to constitute a viable economic unit; and if it is to expand, the number
594 of males must be increased disproportionately compared with females. Since
562 the structure of this "ideal family" (which in the sentiments of the Bedouin
• 858 is the only family) is based on the division of labour, some details of the tasks and their allocation among members of a family are included to estimate the importance of this notional "ideal family."

The Division of Labour, by Sex

462 The tasks women perform are almost entirely associated with the tent.
286 They make the tent top, and the gaily coloured carpets which cover the sandy ground in the men's quarters. They also weave the material for making sacks, and nose bags for horses and camels. Throughout the year a piece of weaving is always on the loom waiting, and while any women of the tent may take a turn at weaving, the mother decides what is to be made,
462 its pattern and colours and in general directs operations. Women also pitch
342 the tent when the camp is moved; they do so unaided by the men. It is a task which requires considerable strength and only grown girls and mature women can assist in this; younger girls scour the vicinity in search of stones to hold the sides of the tent on the ground after it has been erected.
[356] As soon as pitching is complete, the floor of the tent is brushed clean before carpets are spread and the few articles of personal belongings placed in their proper position.

462 Next, brushwood must be fetched in large quantities for fires. Apart
313 from cooking needs and winter warmth, the fire of each tent is in constant use for preparing the sickly sweet tea, almost the consistency of syrup, which is drunk several times a day regularly and which is made again for even the casual visitor. The task of fetching brushwood is performed daily, and each load takes a few hours of a woman's time to gather and bring back
[412] to the tent. Bushes are uprooted with the aid of a long-handled adze and piled together, to be carried on her back for the homeward journey. The load is cumbersome and heavy; only girls in their late teens and mature women can cope with it.

462 All cooking is done by the women. Most meals consist of cereal dishes of
252 various sorts, so that grinding, using heavy millstones, is a perpetual ac-
412 tivity to satisfy the demands for large quantities of flour. Millstones are bought in the villages. In most small camps there only one or two sets, so they are passed round from one woman to another. The stones are very heavy but when they are carried from tent to tent men offer no assistance.

462 Each tent also requires large quantities of water for human consumption.
312 If the camp is located near a well, water is drawn in small quantities, frequently. Young girls and boys take a donkey to the well, fill a couple of
[492] jerry cans with water, wait for an older sister to load them on the donkey and then drive the beast back to camp. After a fall of rain, while puddles of water remain on the ground, mature women make haste to gather the
